

# 3P Technik Rain-Tank Systems

with Filter-Collector, Automatic Pump and all Accessories

## Above-Ground Rainwater Storage System

A durable, premium-quality garden solution for collecting, storing, and pumping rainwater. The Rain Tank System offers a practical and convenient alternative to underground rainwater harvesting systems.

**Large 800-litre Rain Tank** supplied with tap and holesaw set. Its attractive, modern design features a compact footprint that saves space in the garden. Tanks are available in four finishes—British Racing Green, Granite, Sand, or Black—so you can choose the colour that best complements your outdoor space.

**Powerful Automatic Pump** supplied with a **Pump-to-Tank Connector** and multi-hosetail outlet for versatile hose connections.

**Combined Filter and Diverter** cleans rainwater sideways into the tank while leaves and debris continue down to the drain. This highly efficient rainwater filter installs easily onto the downpipe. When the Rain-Tanks are full, the Filter-Collector automatically returns excess rainwater to the drain as normal. Its unique removable filter cartridge can be taken out in seconds for quick seasonal cleaning.

**Tank-to-tank** connectors allow multiple tanks to be linked together. Each tank connects easily to the next using a sturdy 25 mm diameter hose (25 cm long) fitted between the lower metal threads.

**Sight Gauge** provides a clear, quick visual indication of the water level in the Rain Tanks.

**Rain Tanks are available in Green, Granite, Sand or Black**

## 3P Rain Tank System Specification

**Dimensions:** 800mm x 600mm x1790mm (per tank)

**Weight:** 40kg (per tank)

**Material:** PE (Polyethylene)

The dimensions given are a close approximation and not 100% exact due to tanks flexing – they may vary very slightly.

Sight Gauge and Hi-Flow tap (3/4") for faster filling of watering cans included.

3P Filter-Collector for optimum filtered rainwater quality.

Fully waterproof (and submersible) pump delivers up to 3000 litres/hour.

Easy-fit pump connection point and a second connection point so that systems can be expanded at anytime with the addition of further tanks

### Typical system sizes;

800 litre	(1 tank)
1600 litre	(2 tanks)
2400 litre	(3 tanks)
3200 litre	(4 tanks)
4000 litre	(5 tanks)

## System Size Options

Any multiple of 800 litres is available.
